

Fall arrest equipment

HT transport harness

Definition

The TRANSPORT Harness is designed for interventions on pylons when working at great heights.

Fonction

The harness comprises a back anchorage point, a braided fabric chest anchorage point, two anchorage points on the belt and a stomach suspension point made of braided fabric.

The TRANSPORT harness is particularly comfortable. The original design of its shoulder straps provides freedom of movement to the shoulders by the strap which slides in the back anchorage point.

By its automatic buckles, the harness is easy to fit on and comes in three.

sizes : S / M / XL.

Technical specifications

- Polyester strap 45 mm.
- Yellow dichromate steel buckles.
